Work Experience

Undergraduate Research Assistant

- Conducted thermomechanical hot-compression experiments on 316L stainless steel cylindrical and double-cone specimens using a Gleeble system, analyzing load, temperature, and deformation behavior across 200–1400°C through QuikSim.
- Prepared and manually polished mounted metal samples for student research projects using metallographic grinding and polishing procedures to achieve a smooth surface.

Skills

- | | | |
|-------------------|--------------|-----------------|
| • SolidWorks | • MATLAB | • CNC Machining |
| • Microsoft Suite | • Fusion 360 | • Mastercam |

Education

The University of Tennessee, Knoxville

Bachelor of Science in Aerospace Engineering
Engineering Management Minor

Knoxville, Tennessee

May 2027

School Experience

Anderson Center for Entrepreneurship and Innovation

Ambassador

Knoxville, Tennessee

February 2025 – Present

- Delivered presentations to 30+ high school students on the fundamentals of entrepreneurship and techniques to begin their entrepreneurial journey
- Worked with other ambassadors to create innovative strategies to promote ACEI interest

Society of Manufacturing Engineers

Member

Knoxville, Tennessee

August 2025 – Present

- Applied Fusion360 and Mastercam skills during SME workshops and technical sessions to gain hands-on work about manufacturing concepts using CNC machining.

Projects

Airplane Performance

- Developed a MATLAB graphical user interface software to analyze aircraft performance and calculate key parameters including lift, power required, thrust, and flight performance characteristics.

ACE Manufacturing Bootcamp

- Completed America's Cutting-Edge training in CNC machining using Fusion 360 and Mastercam
- Designed and assembled an air-powered piston utilizing a piston cylinder mechanism for an assembly challenge using Fusion 360

Heat Transfer Analysis

- Built a MATLAB heat-transfer simulation to analyze copper and bronze metal blocks, implementing finite-difference equations and Gauss-Seidel iteration to generate 2D temperature distribution plots and compare coarse vs. fine mesh results

Certifications

- Lean Six Sigma Green Belt
