WORK EXPERIENCE

Manufacturing Research Assistant

- Conducted hot-compression experiments on 316L stainless steel cylindrical and double-cone specimens using a Gleeble system, analyzing load, temperature, and deformation behavior across 200–1400°C through QuikSim.
- Prepared and manually polished mounted metal samples using epoxy grinding to achieve a 1200 surface-level grit.
- Operated a Model 4660 HiTorque Mill to machine and level 304L stainless steel surfaces in support of graduate research work.

SKILLS

Certifications: Lean Six Sigma Green Belt, Certified Associate Project Manager (CAPM)

Manufacturing: Welding, CNC Machining, Additive Manufacturing, Milling

Software: MATLAB, SOLIDWORKS, Microsoft Suite

Soft Skills: Communication, Team Collaboration, Attention to detail

EDUCATION

The University of Tennessee, Knoxville

May 2027

Bachelor of Science in Aerospace Engineering

Engineering Management Minor

SCHOOL EXPERIENCE

Anderson Center for Entrepreneurship and Innovation

Knoxville, Tennessee

Ambassador

February 2025 – Present

- Delivered presentations to 30+ high school students on the fundamentals of entrepreneurship and techniques to begin their entrepreneurial journey
- Worked with other ambassadors to create innovative strategies to promote ACEI interest

PROJECTS

Airplane Performance

- Developed a MATLAB graphical user interface software to analyze aircraft performance and calculate key parameters including lift, power required, thrust, and flight performance characteristics.

ACE Manufacturing Bootcamp

- Completed America's Cutting-Edge training in CNC machining using Fusion 360 and Mastercam
- Designed and assembled an air-powered piston utilizing a piston cylinder mechanism for an assembly challenge using Fusion 360

Heat Transfer Analysis

- Built a MATLAB heat-transfer simulation to analyze copper and bronze metal blocks, implementing finite-difference equations and Gauss-Seidel iteration to generate 2D temperature distribution plots and compare coarse vs. fine mesh results
